

European Solar Asset Analytics (1986-2015)

Countries:

All countries

European Solar Resource

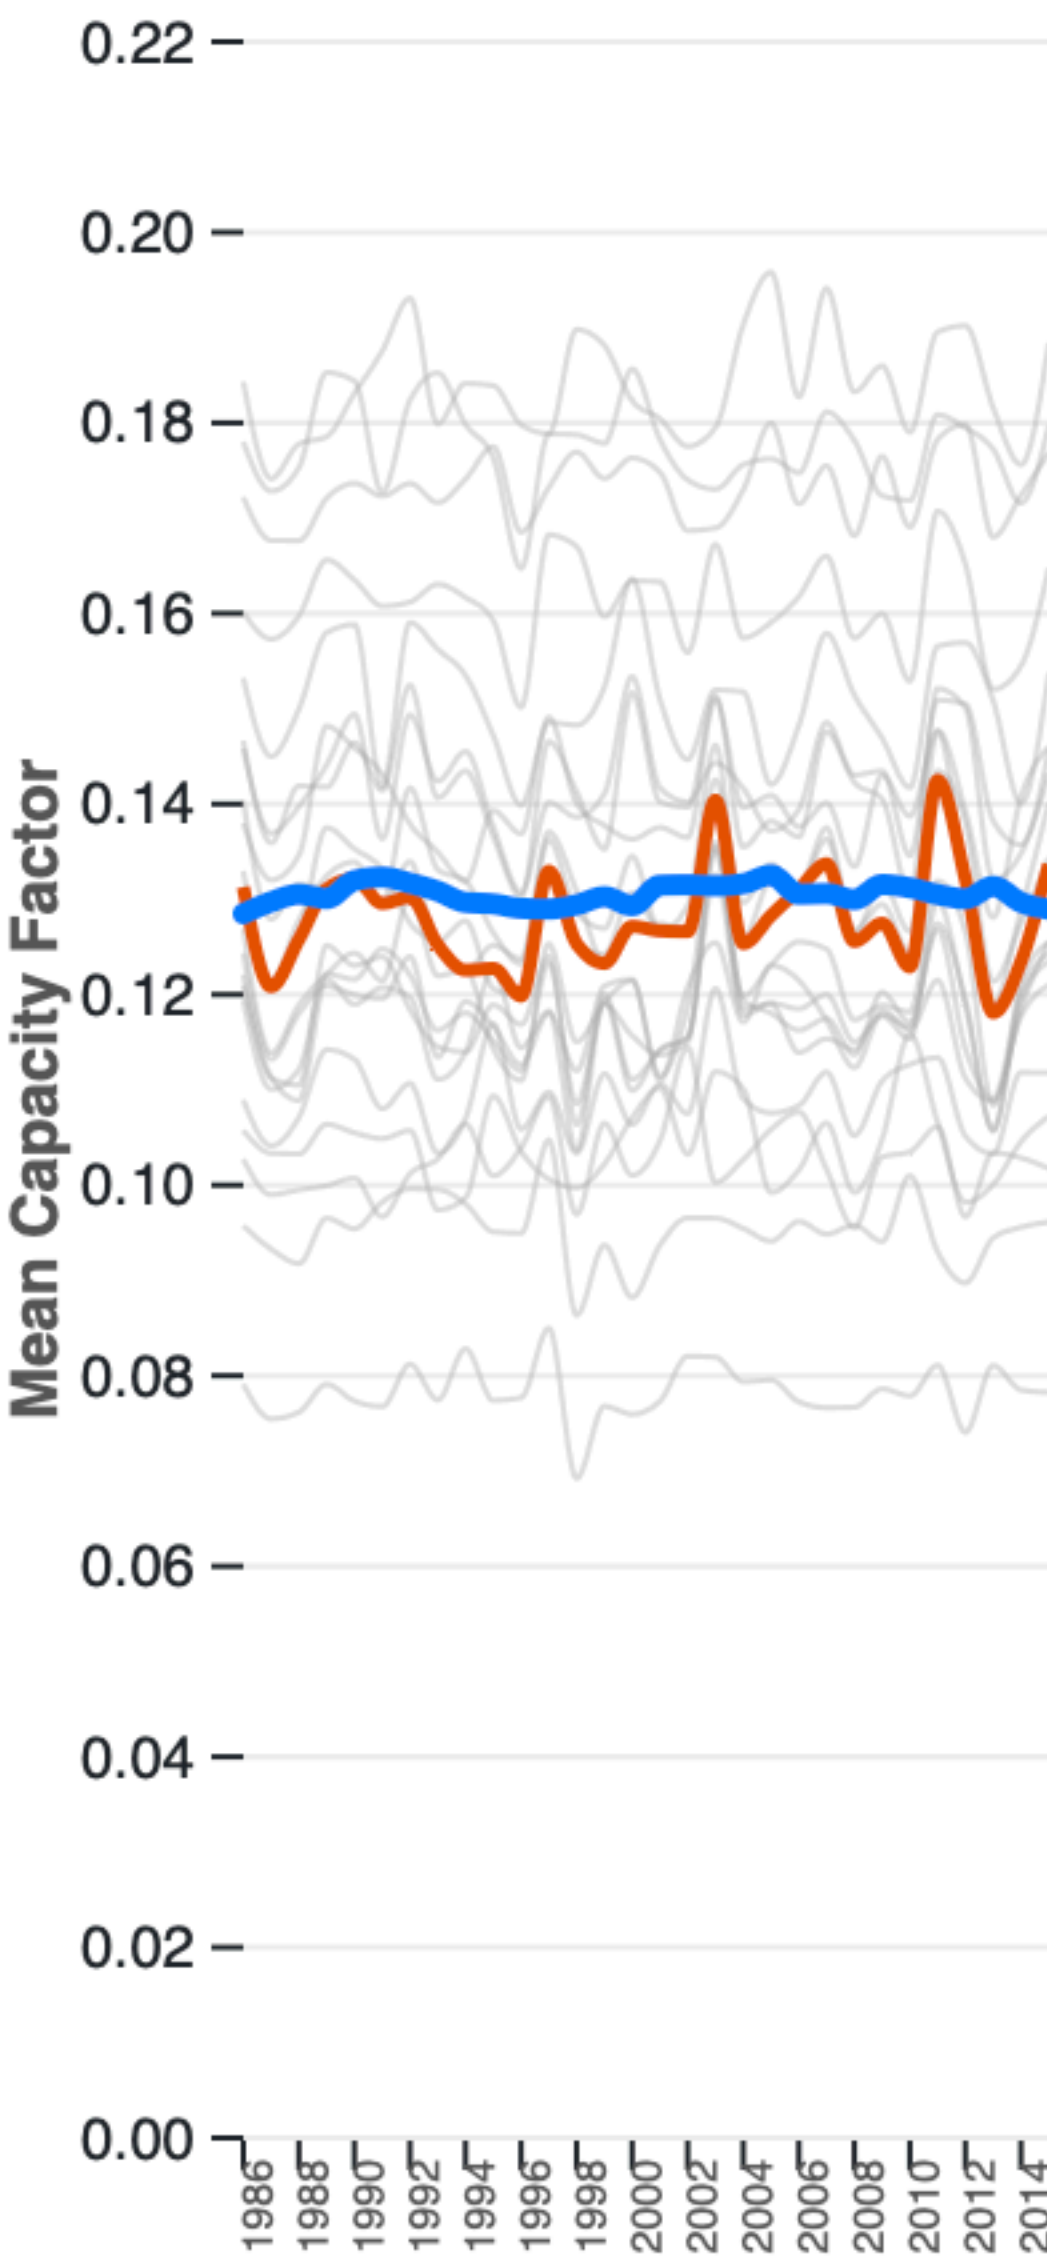

Corridor

Multi-line chart showing climate trends for all 21 European countries from 1986 to 2015.

Country Trend

P50 Median (Benchmark)

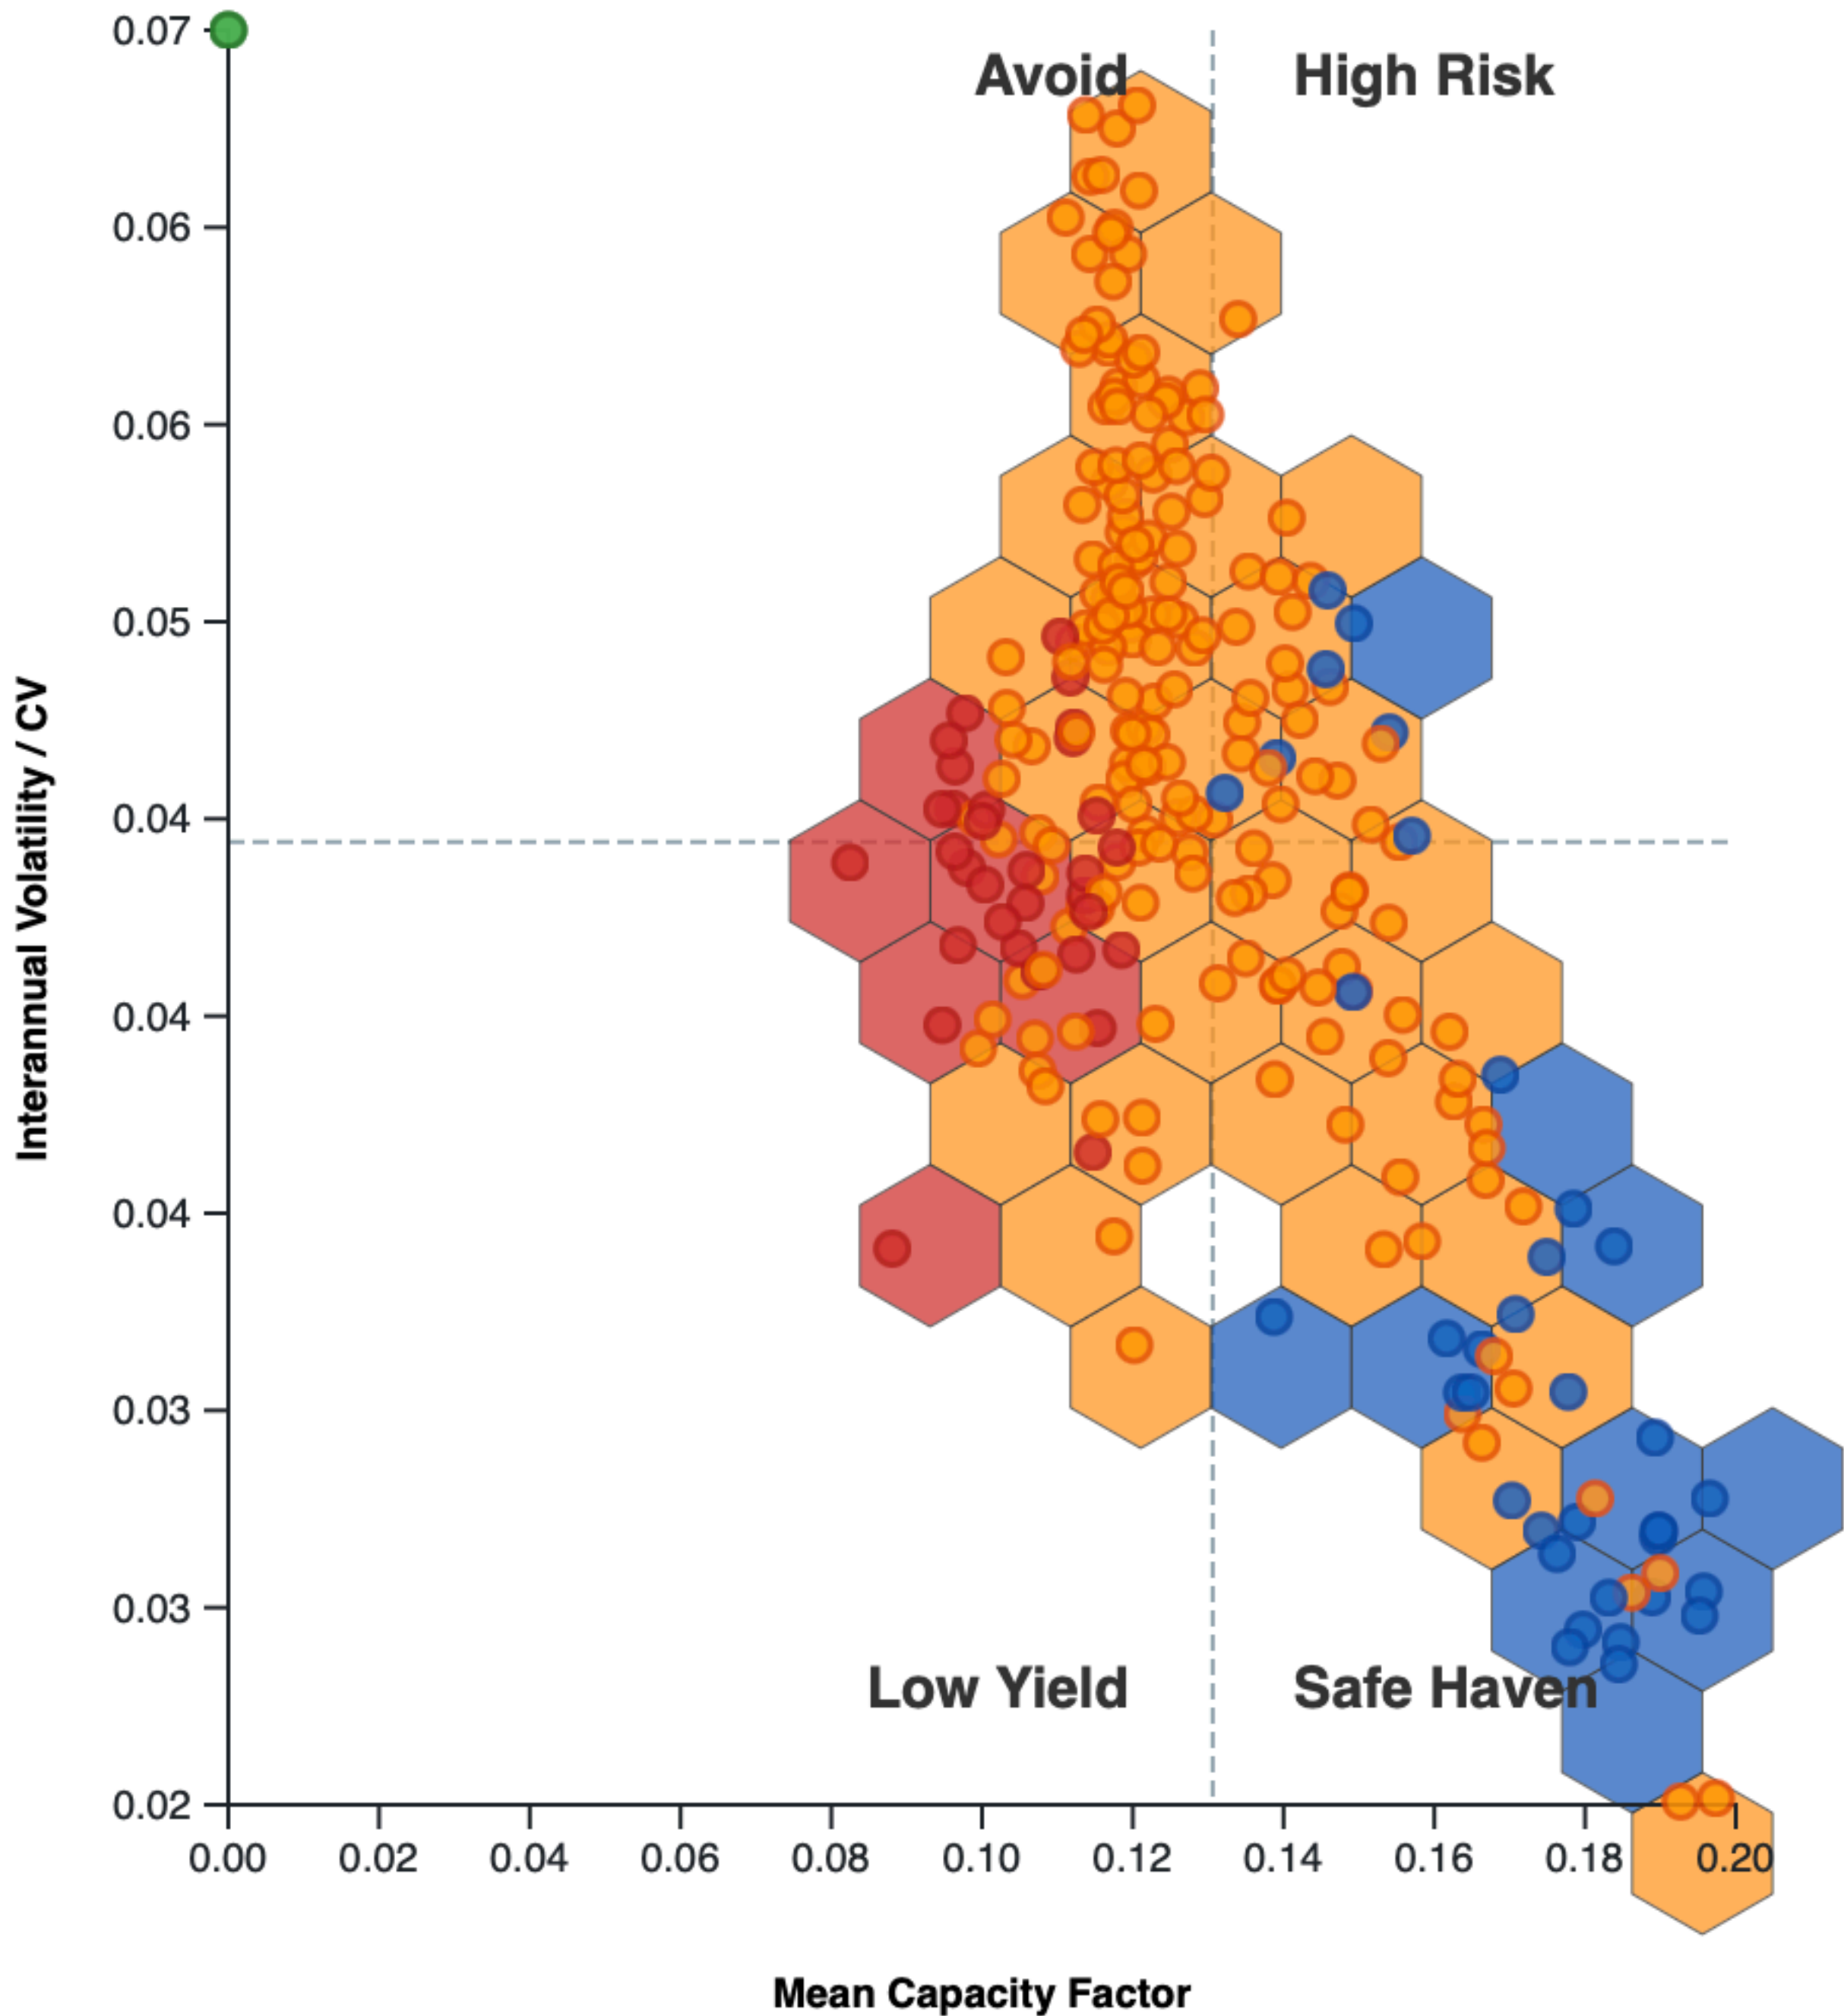

5-Year SMA (European Average)

Solar Yield & Stability Map

This is a "heat map" of Europe showing the geography of yield and risk. Each dot represents a single region (NUTS-2). Colors indicate the Winter Gap metric (winter vs summer solar yield disparity).

Low Winter Gap (<0.25) Moderate (0.25–0.50) High (0.50–0.75) Critical (>0.75)

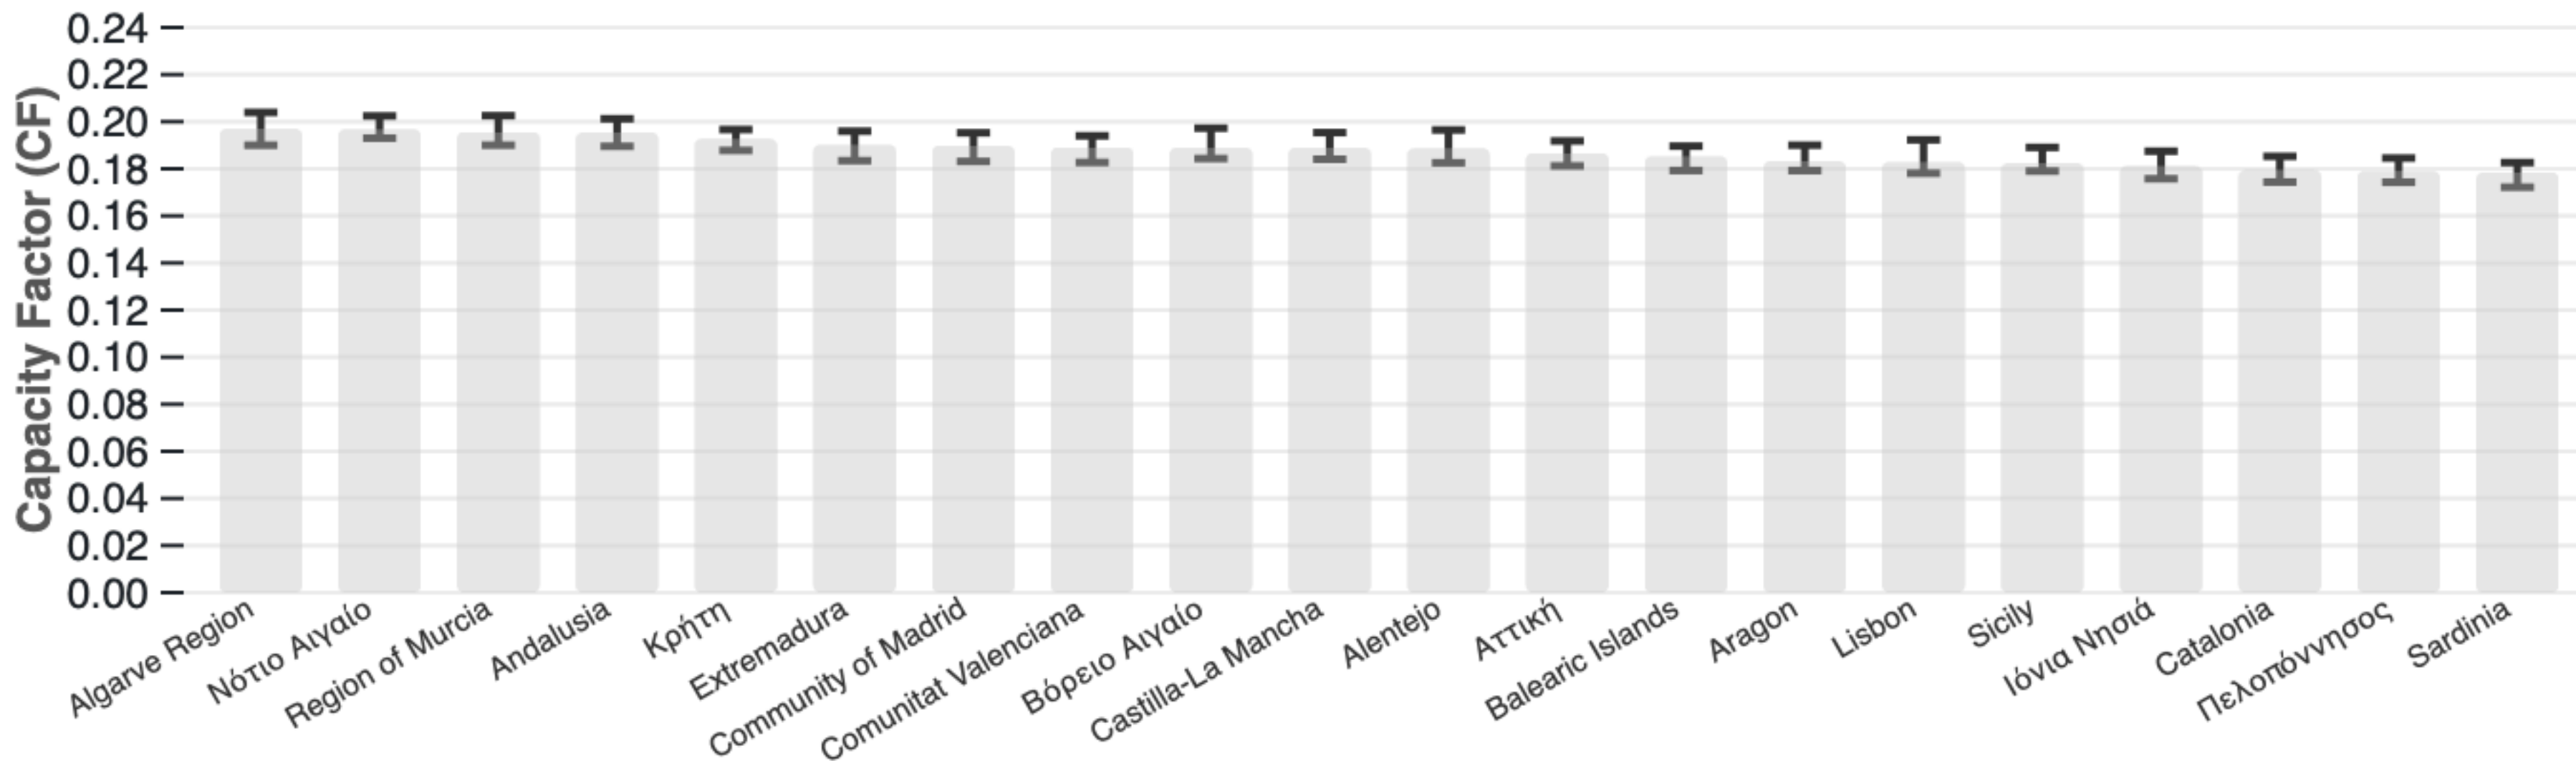

Yield Volatility & Risk by Region

< 1 / 13 >

This is the risk profile for each region. It shows not just the "average sun," but the spread of outcomes: from a bad year (P10) to an exceptionally good year (P90).

P50 (Median) P10–P90 Range

Downside Risk Scatter (P50 vs P10)

Scatter plot showing the relationship between expected yield (P50) and downside yield (P10). Points further below the diagonal line indicate higher downside risk.
